

# Mixing Solutions for WATER & WASTEWATER TREATMENT PLANTS

Water and wastewater treatment is a complex, multi-step process that relies heavily on quality control.

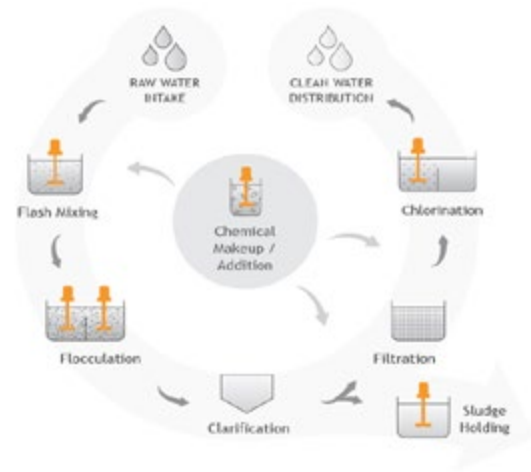

While some chemicals simply need to be dissolved, others, such as lime slurries, require that solids be kept in suspension. Similarly, agglomerated particles formed during flocculation are highly sensitive to shear.

Eliminate mixing issues in your water and wastewater treatment processes by using Dynamix's high-pumping, high-torque industrial agitators. These high efficiency, robust mixers ensure that your product is brought to specification.

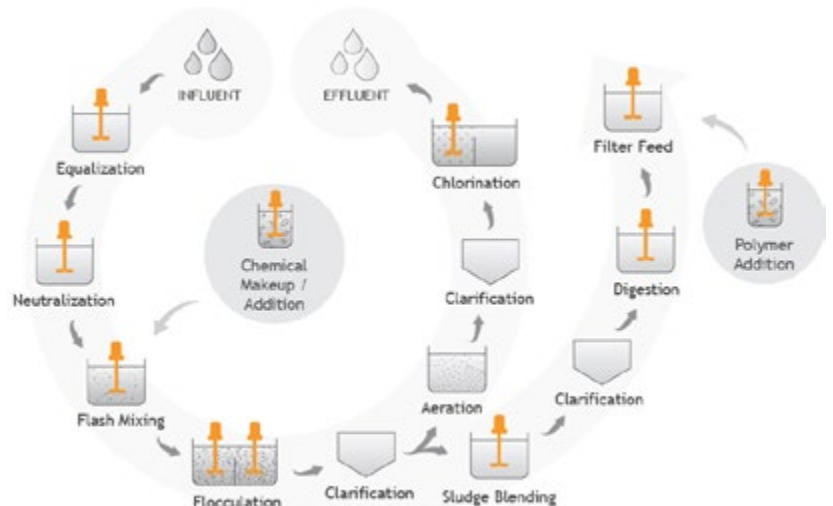

Dynamix has a full line of mixers that we configure and optimize for each stage of your process.

- + Chemical Makeup and Storage
- + Rapid / Flash Mixing
- + Flocculation
- + Activated Carbon Slurry Mixing
- + Equalization and Neutralization
- + Anoxic Dentrification
- + Anaerobic Digestion
- + Chlorination

## TYPICAL Water Treatment Process

## TYPICAL Wastewater Treatment Process

# Our product line at a glance

## MMX Series: Drum Mixers

50 - 250 Gal

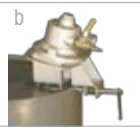

Drum Lid Mount

Bung Mount

a

b

Universal Drum Mount (a - open, b - closed)

## ITM Series: Tote Mixers

200 - 600 Gal

Plastic Tote Mount

Stainless Steel Tote Mount

## DMX Series: Portable Mixers

100 - 3000 Gal

Plate Mount

Clamp Mount

## GMX Series: Medium Tanks

2000 - 10,000 Gal

## Side Entry Mixers

DMX

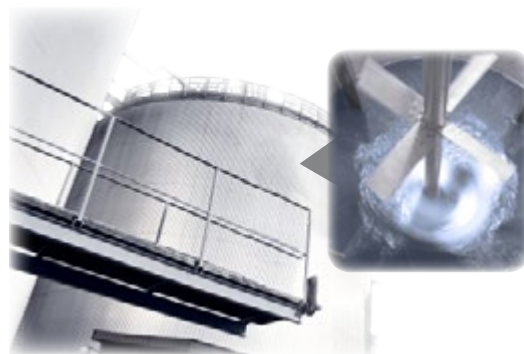

Nautilus

## Nautilus Series: Large Industrial Tanks

2500 - 100,000 Gal
